Solar Charging System SOLAR pro II 2.5W Modular solar charging system

Part no: 15.585.400

The OZRoll SOLAR pro II is the newest evolution of the SOLAR pro product family. It is composed of three modules: the battery, a solar charging panel and electronics. The modules are simply attached to each other with a plug-and-socket connector which allows easy exchange if required. As before the SOLAR pro II is easily installed with two mounting clips that the unit is simply clicked on to.

Important Installation Information:

The Solar pro II requires direct sunlight throughout the year (an average of one hour per day). Shading by trees, buildings, topography etc. must be avoided at any time. If the solar module or parts of it are placed in shadow, then no solar charging will be achieved!

Technical Specification General:

Length: 624 mm
Height: 78 mm
Thickness: 21.5 mm
Weight: approx. 860gr
Number of Clips: 2
Cable loom: 30 cm

Technical Specification Solar Panel:

Capacity: 2,5 Watt
Type: Crystalline

Technical Specification Battery:

Type: LiFePO4
Power: 5A
Capacity: 1500 mAh
Temperature range: -10°C to 60°C
